

Daily Report 4

Date: 25th of February

Topics of the day

1. Hydrological analysis

We are not able to use the results of the Kriging method in Mike SHE. We developed an analysis about the accuracy of the Kriging method. Gonzalo will add the results to the hydrological report. Morgan and José will finish the part of the hydrological report dedicated to MikeSHE. Masato finishes his frequency analysis and writes a report about it. Poh Hoon will put all the pieces together to get a final hydrological report!

2. Mike 11 :

We continued comparing different hydrgraphs produced by Mike11, using different upward boundary conditions resulting from:

- Mike SHE
- HECHMS
- Other hydrological analyses

We tried to couple Mike11 with MikeSHE. Finally, we started the calibration process.

3. Special topic :

In the morning, we had a final discussion on the content of the presentation. We adapted some slides, and added more graphical material of our own results. Gonzalo will adapt the lay-out of the presentation.
